Bulk SMS

In an era of rapid technological advancements, mode of communication is becoming lot more sophisticated. A new and modern way of reaching your target market and communicating them is through SMS (Short Messaging Service). IBS Internet Business Solution offers you this mode of communication through its bulk SMS service.

Bulk SMS service reaches your target audience at a very economical price, putting behind the conventional mode of advertising that costs you in multiples compared to SMS service.

High Speed messaging in world, yet simple and reliable. We provide you the fastest messaging solutions allowing the organizations to communicate with their clients on urgent and personal basis.

HTTP Connectivity

This document covers the HTTP method of connectivity. Additional documents are available for other types of connectivity.

This is one of the simpler server-based forms of communication to with our gateway. It can be used either in the form of a HTTP POST or as an URL. We recommend POST for larger data transfer, due to the size limitation of GET.

Communication to our API can be done via HTTP on port 80. All calls to the API must be URL-encoded.

The beauty and add-on advantage of http connectivity is that you can check or access the gateway even on web based applications.

The parameter names are case-sensitive, so it is important to read entire document prior to seeking assistance from IBS.

HTTP URLS

Unicode:

URL for Single SMS service

<http://www.jawalsms.net/httpSmsProvider.aspx?username=xxxxxx&password=xxxxxx&mobile=9665xxxx&unicode=U&message=062A062C063106280647002006450646002006450648064206390020062C064806270644&sender= your sender name here>
